INTRODUCTION

Employment and wage data for Utah firms presented in this publication are categorized by number of jobs during March of the designated years. Grouping Utah employers by this criterion provides useful data with which to analyze employment statistics. For example, general trends of firm size by geographic region and industry can be identified, as can wage rate levels by employment size and industry.

In this publication, the number of reporting units in Utah is different from the number of actual firms. The term "reporting unit" is used to identify a firm, an organization, a division, or an establishment whose employment data are maintained separately by the Utah Department of Employment Security.

Beginning in the first quarter of 1980, employment and wage data have been maintained separately by industrial activity and worksite location. However, for some industries, such as construction and mining, mobility of employment prohibits establishing permanent worksites. Data for these industries can only be maintained at a county level. In Utah, approximately 2,100 firms are multiple worksite employers, comprising over 11,000 worksite units. As a result, the number of reporting units used in this publication is larger than the number of employers in Utah.

SECTION I

UTAH REPORTING UNITS, EMPLOYMENT AND WAGES, BY FIRM SIZE AND INDUSTRY FOR FIRST QUARTER 1991

SECTION I

UTAH REPORTING UNITS EMPLOYMENT AND WAGES, BY FIRM SIZE

Every quarter, the Utah Department of Employment Security collects and compiles employment and wage data from all nonagricultural employers in Utah. Data are collected at the individual establishment level for each individual store, plant, or permanent worksite facility. These individual establishments are called "reporting units." Since each reporting unit is assigned an industry and a county code, employment and wage data can be categorized into industry and county classifications.

During the first quarter of every year, reporting unit statistics are summarized into ten size groups. These categories, based on March employment levels, are 0, 1-4, 5-9, 10-19, 20-49, 50-99, 100-249, 250-499, 500-999, and 1,000 and over. Because Utah's employers are made up of many small-sized firms and relatively few large ones, the number of firms within a size category are inversely related to the size categories themselves. In fact, nearly one-half of Utah's employers employ fewer than five workers, and 99.4 percent employ fewer than 250 workers.

The distribution of the number of workers among these ten categories is considerably different from the number of firms in these categories. While nearly one-half of the number of firms are in the two smallest size categories (employing 0-4 workers), only 5.3 percent of total non-agricultural employment is found in these classifications. Actually, the highest employment levels are concentrated in the middle-sized categories and the largest group (employing 1,000 and over). The three middle classifications (employing 20-249 workers) contain over 45 percent of total non-agricultural workers, while the largest group contains nearly 16 percent.

With one exception, total wages within each size category show a pattern similar to that of employment. The one exception is that the largest amount of total wages is in the 1,000 and over category while the largest amount of employment is in the 20-49 category. The next three highest levels of total wages are found in the middle size categories of 20-49, 50-99, and 10-19 respectively.

Average monthly wages generally correlate with size category. Except for the (1-4) and (500-999) size groups, average monthly wages increase in direct proportion to employment size categories. This correlation, however, does not exist for all industries. For instance, Finance, Insurance, and Real Estate reports its highest average wage level in the seventh size category (employing 100-249 workers). Trade has its highest level in the eighth size category (employing 250-499 workers) while Services shows its highest level in the second size group (employing 1-4 workers).

***Prior to 1980, employment and wage data for each firm were separately maintained for each county and/or industry of operation. Effective with 1980, data for each firm are maintained at the individual worksite level. As a result, the 1980 Reporting count is inflated relative to earlier years and growth comparisons are therefore not valid. Also, a number of firms previously categorized in the larger size categories are now broken down by worksite and fall accordingly into smaller size groups.**
